

Title: بلوچستان میں قدرتی آفات کا انتظام و انصرام

Language: Urdu

Author: Sultan Ahmed Shahwani

Prepared by: PDI Documentation Wing

Publication Year: 2010

Theme: DRR

Baluchistan is largest province of Pakistan by area, constituting approximately 44% of country's total land mass. 45% land escape is covered with hilly areas, while remaining is also semi hilly area. Balochistan is vulnerable to all kinds of disasters including floods, droughts, earthquakes and tsunamis.

Disaster risk management and planning is key to reduce the disaster losses. Keeping in view this reality, PDI prepared this publication for Balochistan province. The book covers natural disasters as major adverse event resulting from natural processes of the earth. The book includes natural disasters, its causes and its implication for loss of life or property damage.

The book covers geographical structure causes the different disasters, such as earthquakes, droughts and floods. The book also tells about tsunami. This book contains very comprehensive context of disaster in province along with mitigating strategies and information on numerous key stakeholders responsible for stimulus situation.
